

Fogo Cruzado: Collaborative online map registers almost 800 shootouts and firearms shootings in Rio de Janeiro in July.

App developed by Amnesty International in Brazil has been downloaded over 35,000 times on the road to Rio2016.

Rio de Janeiro, August, 02nd, 2016 - Almost 4 weeks after its launch, the Fogo Cruzado (Cross Fire) app, an Amnesty International initiative, has published **756 notifications** reportings shootouts and/or firearms use in Rio de Janeiro's metropolitan region in the past month of July. Amnesty is releasing today the first monthly bulletin consolidating information received from July 5th till August 1st. <http://fogocruzado.org.br/relatorios>. More than 35,000 free downloads of the app have already been made on both Android and iOS platforms.

During the period, **756 notifications were published** in the Fogo Cruzado map. Of those, **51 notifications indicated fatal victims, 73 indicated harmed people and 128 accused police operations**. All notifications sent by users are moderated before being posted at the online map at www.fogocruzado.org.br.

Besides the notifications shared by users, the monthly bulletin also includes information gathered via news and police channels, such as the daily newsletters published on the website of the Military Police of the State of Rio de Janeiro. From the total, **111 notifications** were collected from press and police channels by the Fogo Cruzado team, reporting **22 fatal victims, 39 harmed people and 41 police operations** for the month of July.

July's report shows that **Complexo do Alemão** is an area highly targeted by armed violence in Rio. Since the Fogo Cruzado app went live, the community has been figuring among the top 3 regions with more notifications, with incidence of shootouts compared to entire municipalities such as Sao Gonçalo and Duque de Caxias, located in the metropolitan region of Rio.

The app will operate on pilot mode until the end of this year and is being constantly upgraded to overcome technical issues reported by users. In October, Amnesty International will release the first 3-month report for the information gathered by the app, revealing the context of armed violence in the pre and post Olympic host city, and adding complementary analysis on the broader social impacts of armed violence on health, transport and education services.

This initiative is part of the campaign Violence Has no Place in these Games, that raises awareness about the risk of increased human rights violations in the context of megasporting events such as the Olympics.
